PRESS RELEASE

CLARK EQUIPMENT EXPAND CHAMPION GRADER RANGE

9/07/2008

Following the introduction recently of the first Champion compact graders in Australia and New Zealand, Clark has committed to expand the product line by offering an additional four models of Champion graders, the models C60C, C66C, C70C and C86C. The product range now totals 5 graders including the C80C initially introduced

The range includes now 2 models of all wheel drive graders, one rear wheel drive and three tandem drive. With this range the Champion grader will suit a greater range of applications and user's requirements for grading in confined construction sites where larger graders experience difficulty in manoeuvre, and access with the additional advantage of a lower capital outlay and operating costs

Champion C Series Compact Graders lead the industry in grading power, precision and durability. Every engineering detail counts, from easy service access, to a rugged tool carrying frame, to fully certified braking systems. From small to big, the consistent manufacturing processes meet the standards to ensure that the customer enjoys performance, reliability and design-for-purpose. At Champion, big ideas are at work in all C Series graders – every manufacturing step builds in big quality, every feature has big benefits, and every option adds big payback for owners and operators.

Champion C Series Motor Graders act big: a full range of blade and wheel mobility, precise and stable blade control, twin-cylinder circle turn, and a wide stance blade lift system blade are all standard on Champions. The cab layout mirrors those found in much bigger machines, with industry-standard pedestal and levers and lots of room to go to work. Fully tested quiet ROPS cabs with HVAC are also available. Rounding out the big feeling are Tier 3 Emissions certified engines from Cummins and fully certified braking systems.

The hydrostatic All Wheel Drive models C66, C86 use separate hydraulics for power through turns and in all traction situations ensuring no loss of power to the wheels. This includes the ability to disengage the tandems and let them freewheel while being powered by the two front wheels with hydrostatic drive.

Additionally, value added Champion options and attachments can make every Champion C Series Grader the ultimate productivity machine. Depending upon the model you can add a Scarifier, Ripper, Dozer, Broom, Roller, Tamper, Blade Control system or a Counter Weight, and turn your Champion into a big machine of choice on your worksite to get the job done right and done fast.

About Champion

One of the oldest names in the equipment industry, Champion Motor Graders has specialized in the development of compact graders and attachments for over 25 years. Champion engineering and manufacturing, based in Charlotte, North Carolina, USA are dedicated to the production of compact machines that assure customers of the same productivity and quality standards they expect from the best in full-size construction machinery. The Champion line-up now includes five basic models with operating weights to 12,800, featuring the full range of single-axle, tandem and all-wheel 4x4 and 6x6 drive systems. Champion continues to develop a growing range of specialized equipment for the road maintenance and paving industry.
